

YOWOW DIGITAL CO.,LTD

RD1041 Series

4-Port Quad View DVI USB KVM Switch

RD-1041 is a new generation Multiviewer KVM Switch, it allows you to simultaneously monitor up to four computers on a single display, operate multiple computers with one keyboard/mouse set.

◆ Auxiliary full-screen output

The auxiliary output can be used to drive additional full screen from one of the connected computers, let you operate the computer in a native manner while monitoring other computers from the 4 split fields of the primary output.

◆ Remote console

Built-in KVM extender let you manage the servers remotely, freeing you or your installation from strict environment.

◆ Programmable

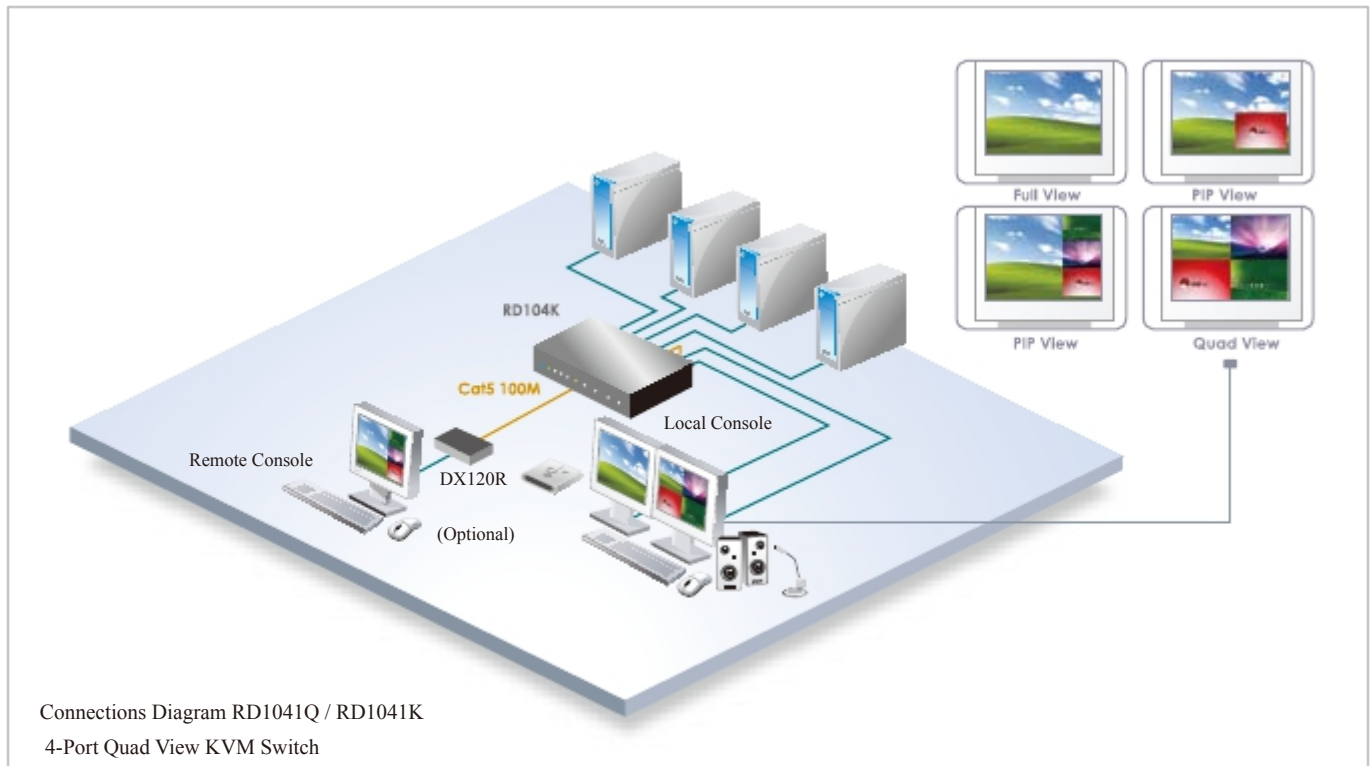

RS-232 management port allowing you to develop specific management programs.

◆ Extensibility

Multiple RD-1041 can be daisy-chained up to 8 units, allowing you to manage 32 computers with a single mouse/keyboard set. Moreover, with Uniclass intuitive border-switching technology it is easy to switch between units just by moving the mouse pointer across the edge of the screen to the screen of another unit.

Multiviewer KVM is an ideal solution for multi-tasking and monitoring real-time progress such as control rooms; broadcast stations; post-production and live sets.
